

Laser Shaft Alignment

It's a fact. Shaft misalignment is responsible for up to 50% of all costs related to rotating machinery breakdowns. Accurately aligning shafts can help prevent a large number of machinery breakdowns and reduce unplanned downtime that results in a loss of production. In today's challenging environment of reducing costs and optimising assets, the necessity of accurate shaft alignment is now greater than ever.

Our Condition Monitoring Inspector can identify alignment issues in his surveys.

Now let us help you resolve it!

We can laser align your rotating equipment as a corrective action or during installation, assuring compliance and correct operation from the get-go.
